

Silpure

Silpure uses the power of silver to bring long-lasting antibacterial properties to your textiles. This unique patented antimicrobial product contains ultra-fine silver crystals that release silver ions at a controlled rate only when the conditions for bacterial growth exist.

Through careful control of the size and shape of the particles during production, Silpure avoids the fabric discoloration that can occur with other silver antimicrobial products.

Garments treated with Silpure, especially intimates and sportswear, promise lasting cleanliness and freshness. Silpure can also be used to protect domestic textiles such as towels, bedding, upholstery and more from the undesirable effects of microbial growth.

Complete, Safe Antimicrobial Protection

Silpure is a simple-to-use antimicrobial treatment that provides long-term, cost effective protection against unwanted odors. Offering excellent compatibility with other textile finishes, it is typically co-applied by padding with other auxiliaries, meaning no additional processing steps are required. Applicable for both synthetic and natural fibers, Silpure is durable to multiple washes, lasting the useful life of the treated article.

Regulatory Certification

Silpure is US EPA registered, BPR compliant and Oeko-Tex listed, and complies with all regulatory requirements of each country where it is sold.

Available Around the World

Regardless of where you are located, our network of regional sales representatives will reach out to offer our antimicrobial expertise. We are happy to provide on-site technical support to ensure the treatment is optimized in the application process. Once applied, the Silpure brand offers you a powerful market tool that expresses integrity and performance.
